Dedication

For Judith, love of my life

and

*For Elise & Lianne, for daily
reminding me of the joy of
discovering new things*

Table of contents

Dedication	v
Preface and acknowledgements	xi
PART I: INTRODUCTION	1
Chapter 1 Externalities, land use planning and urban expansion	3
1.1 Setting the scene	3
1.2 Land market regulation and market failures	4
1.3 Impact of land use policies	7
1.4 Direction of urban spatial growth	8
1.5 Research goals and questions	9
1.6 Study outline and methodology	11
Appendix 1.A List of related publications	21
Chapter 2 Land Markets and externalities	23
2.1 Introduction	23
2.2 Approaches to land markets	24
2.3 Explaining the non-market value of goods and services	34
2.4 Conclusions	38

PART II: VALUING THE IMPACT OF EXTERNALITIES ON CITY DWELLERS 41

Chapter 3 Valuation of open space 43

3.1	Introduction	43
3.2	Methodological-technical design	45
3.3	Estimation results	55
3.4	Conclusion and discussion	60

Chapter 4 Monetary valuation of aircraft noise 63

4.1	Introduction	63
4.2	Literature review	64
4.3	The model	66
4.4	Calculation of noise nuisance	68
4.5	Exploratory data analysis	70
4.6	Regression results	74
4.7	Spatial dependence	77
4.8	Marginal and total benefits of noise reduction	79
4.9	Conclusions	83

PART III: ANALYSIS OF SPATIAL POLICY EFFECTIVENESS 85

Chapter 5 The effectiveness of growth management 87

5.1	Introduction	87
5.2	Land use and the role of spatial policies	88
5.3	Urbanisation and growth management policies	90
5.4	Assessing policy effectiveness	103
5.5	Interpretation of the patterns of change	112
5.6	Conclusions	116
	Appendix 5.A Subdivision of the dutch land market	120
	Appendix 5.B Methodology land-use transition (1977-2000)	124

Chapter 6 Analysing the succes of open space preservation in the Netherlands 125

6.1	Introduction	125
6.2	Open-space preservation in Midden-Delfland	127
6.3	Analysing land-use change in Midden-Delfland: successful open-space preservation	129
6.4	Explaining the succes	133
6.5	Conclusion	136

PART IV: MODELLING LAND PRICES AND LAND-USE TRANSITIONS	137
Chapter 7 Explaining the value of rural land	139
7.1 Introduction	139
7.2 Literature review of the valuation of land	140
7.3 The spatial regression model	144
7.4 Exploratory data analysis	147
7.5 Results of the regression analysis	156
7.6 Spatial dependence	164
7.7 Conclusions	168
Appendix 7.A Other variables used in valuation studies	171
Chapter 8 Analysing rural-urban land use transition in the Netherlands	173
8.1 Introduction	173
8.2 Two hedonic land market models	175
8.3 An alternative approach	179
8.4 Application of model results	192
8.5 Concluding remarks	197
Appendix 8.A The Land Use Scanner model	199
PART V: CONCLUSION	203
Chapter 9 Conclusions and discussion	205
9.1 Introduction	205
9.2 Expressing externalities in monetary terms	206
9.3 Assessing the impact of urban growth management	207
9.4 Estimating probability for urban expansion	209
9.5 Methodological improvements	211
9.6 Scientific contribution	214
9.7 Implications for policy making	216
Bibliography	221
Nederlandse samenvatting (summary in Dutch)	243
Index	251

Preface and acknowledgements

It is hard to imagine at first, but the process of writing a dissertation seemingly has an end to it. I enjoyed writing this study at the Department of Spatial Economics amidst so many excellent researchers to work with and to learn from.

As everyone who writes a dissertation, I owe a lot of thanks to many people. First of all, I am grateful for my three supervisors, Piet Rietveld, Henk Scholten and Adri van den Brink. I thank Piet Rietveld for asking me to become his student-assistant and subsequently showing me the ‘art’ of scientific research, it was inspiring. I am also very much indebted to Henk Scholten for being the one to ask me to stay at the university to write a dissertation, and thanks also go to him for the opportunities to pursue other activities such as education, and other research projects. I further thank Adri van den Brink for the constructive discussions we have had on the role of spatial planning in the Netherlands. Next, I want to thank Thomas de Graaff for patiently explaining spatial autocorrelation to me and for making available his programming skills for some large database calculations. Special thanks are reserved for Eric Koomen, with whom I wrote numerous articles and book chapters, three of which are included as chapters in this dissertation. I really enjoyed working on these publications together. I also thank all my other colleagues at the Department of Spatial Economics and at the Spatial Information Laboratory of the Vrije Universiteit Amsterdam for the pleasant working conditions and all the fun we have had when work was done. In this respect, I especially enjoyed my time in the Department’s ‘feestcommissie’ with Gert-Jan Linders and the Monday-morning discussions on everyone’s performance in the BARON Footballpool. I

would also like to thank Eveline van Leeuwen, for drawing me into the world of micro-simulation modelling, publishing about this together, and for her companionship during the Regional Science-workshop in Jerusalem and the sight-seeing tours afterwards.

As well as my supervisors and VU-colleagues, and the external organizations already mentioned in the colophon, a great many people have made this dissertation possible in one way or another. I should start by thanking Marianne Kuijpers-Linde, Judith Borsboom-Van Beurden, Arno Bouwman and Wideke Boersma for the pleasant working environment during my stay at the Netherlands Environmental Assessment Agency (PBL) in Bilthoven for the project 'Netherlands 2030'. While participating in the aforementioned project on the modelling of future land-use, I learned to work with the *Land Use Scanner* model. I would like to thank Maarten Hilferink from Object Vision BV for his guidance in learning how to program the model configuration. Next, I should not forget to thank the Government Service for Land and Water Management (DLG, part of the Ministry of Agriculture, Nature and Food Quality), in particular the late Ruud Troost and Patrick de Vries, for providing the necessary land transaction data for the analyses in Chapters 7 and 8. For these chapters, I would also like to express my gratitude to the following people of the Province of Noord-Holland: Gerard Kooman, Edwin Bleijinga, Rik Heskes and Ton van Bart. Thanks for the discussions about the land market and for providing spatial data for the analyses. Another important contribution to this dissertation has been made by the Dutch Association of Real Estate Brokers (NVM). Jaap Darwinkel generously made available the NVM data on house transactions for the case studies documented in Chapters 3 and 4 and has also shown an interest in my research. Furthermore, I thank the Netherlands Institute for Health and the Environment (RIVM) and, again, PBL for giving me their data on noise nuisance used in Chapter 4. PBL further provided most of the necessary spatial data that was used in all chapters of this dissertation. Then, I would also like to thank all the anonymous reviewers who have provided valuable comments that greatly helped me shape my work on the publications related to the chapters in this dissertations. I thank Jan Luijt and Tom Kuhlman of the Dutch Agricultural Economic Institute (LEI) and Arno Segeren from PBL for the discussions about land market submarkets, modelling and data issues.

With the unrelenting support of my parents, I enjoyed studying and living in Amsterdam and being able to be an active member of Ichthus Amsterdam for six years. I also thank my friends from Hilversum, with whom I enjoyed many evenings in the 'Gooische Herberg' and elsewhere. I am very grateful

for this important period in my life. Special thanks go to Machiel Reinders, whom I have known since 2nd grade in high school. We studied Economics together, lived together for some years during our studies, wrote a M.Sc. thesis together and both decided to start writing a dissertation in 2002. Even after Machiel left the VU to start working at the LEI, and our roads separated in that respect, it was no surprise to learn that our dissertations are, again, finished almost simultaneously.

Last, but certainly not least, I am very thankful for all the support by Judith, Elise and Lianne and the occasional and necessary pleasant distractions from work. I am very happy that we are now on the verge of concluding a period of frequently working late, so let's now celebrate together and then turn our attention to other things.

Amsterdam, November 2009
